

Abstract

Summary

Mycotoxin adsorbents are produced containing an organically modified (organophilic) layered silicate, in which quaternary onium compounds ^{contain} with at least one chain- C_{10} to C_{22} alkyl group and at least one aromatic substituent ~~are used for modification~~, or containing a mixture of ~~not~~ organically modified silicate and a layered silicate organically modified at least to 75%, ^{referring} referred to the total cation exchange capacity (CEC) of the layered silicate
